

REGAiN-1A

Currently Seeking Patients with Painful

DIABETIC

PERIPHERAL

NEUROPATHY

The REGAiN-1A Study is a clinical study designed to evaluate the safety and effectiveness of an investigational drug (Engensis) in patients with painful DPN. The goal is to see what effect Engensis has on reducing pain in the feet and lower legs. This is a double-blind, placebo-controlled study. All study participants will be randomized at a 1:1 ratio to receive either the investigational drug or the placebo.

Please consider presenting this clinical study opportunity to your patients who:

- Are 18 years and older
- Have been diagnosed with type 1 or 2 diabetes
- Are on current diabetes standard of care
- Do not have unstable diabetes or significant medical problems, progressive end-organ disease
- Have a documented diagnosis of bilateral painful DPN in both lower extremities
